Professional Summary

Motivated and detail-oriented Computer Science undergraduate with hands-on experience in Python, frontend, and backend development. Skilled in building full-stack web applications using Flask, Django, React JS, and MySQL. Strong understanding of REST APIs, database management, and responsive web development. Passionate about solving real-world problems through scalable and efficient software solutions.

Education

Government Engineering College Patan

Bachelor of Engineering – Computer Science Engineering

Patan, Gujarat, India

Aug 2022 – May 2026

Technical Skills

Programming Languages: Python, SQL, JavaScript

Frontend Development: HTML, CSS, Bootstrap, React JS

Backend Development: Flask, Django, REST APIs

Database: MySQL, SQLite, MongoDB

Tools & Platforms: VS Code, Git, GitHub, Docker

Projects

AI Resume Analyzer

- Designed and developed an AI-powered web application that analyzes resumes for ATS compatibility, automatically extracts relevant skills, and generates personalized job recommendations.
- Implemented NLP-based text parsing pipeline to compute ATS match scores, enabling candidates to identify and close skill gaps against target job descriptions.
- Built RESTful backend using Python and Flask, integrated with MySQL for persistent user data storage and session management.
- Delivered automated skill-based recommendation engine that improved resume evaluation accuracy and reduced manual review effort.
- Tech Stack:** Python, Flask, MySQL, NLP, HTML, CSS, Bootstrap

Smart Expense Tracker

- Architected and built a full-stack expense management web application enabling users to log income and expenses, set budget targets, and monitor financial health in real time.
- Developed a REST API backend with Flask and MySQL to handle CRUD operations for transactions, supporting secure user authentication and multi-category budget tracking.
- Engineered an analytics dashboard delivering real-time financial insights including monthly spending trends, category-wise breakdowns, and budget utilization summaries.
- Optimized database queries to ensure sub-second response times for analytics endpoints across large transaction datasets.
- Tech Stack:** Python, Flask, MySQL, REST APIs, HTML, CSS, Bootstrap
